

PILLAR · THE FRAMEWORK

LastStop for a store

Keep your store. LastStop runs the work around it.

- WooCommerce or Shopify stays the storefront. LastStop is the operating, creative and compliance layer above it, with Atlas_{TX} as the AI COO.
- The store connector (orders, customers, products, stock, lot and COA fields) is in the build plan. Nothing is connected yet.
- Until then, every store screen runs on labelled SAMPLE data.

STORE CONNECTOR: IN THE BUILD PLAN

[08 AI at work, store mode](#)[09 Integrations for a store](#)[10 On a phone](#)

The screenshot displays the LastStop OS interface for a store named 'Norvane'. The top navigation bar includes the store name, version (v1.0), estimated cost (\$9.00), a 'SAMPLE DATA' toggle, a 'Clear sample data' link, the user 'Atlas_{TX} - AI COO', and a 'Log out' button. The left sidebar is organized into four categories: OPERATIONS (Dashboard, Support tickets, Follow-ups, AI Outreach, AI at work, Integrations, Billing, AI Assistant), COMPLIANCE (Compliance Scanner, Fix a flagged ad, Site scan), GROWTH ENGINE (Brand Absorber, Image Ad Studio, Asset Library, Design Studio), and SYSTEM (AI Jobs Queue, Usage & Cost Meter, Audit Log, Settings & Keys). The main content area is titled 'Integrations' with a subtitle 'Platform partner support and availability' and an 'IN PROGRESS' status. It features three numbered sections: 1. Payment Types, 2. Shipping & Fulfillment, and 2. Email/SMS & Analytics. Below these is an 'Integration Status' table with columns for 'Available (adapter built)', 'Planned', and 'Reference'. The 'Available' column notes that the connector is built into the engine but lacks a contract or credentials. The 'Planned' column indicates the connector is on the roadmap but not yet built. The 'Reference' column notes it is included for market comparison with no planned integration. A 'RECOMMENDED INTEGRATIONS' section follows, listing 'High-Risk Card Processing' and 'ShipStation' as 'Our pick' with descriptions of their functions and a 'Planned' status. At the bottom, a 'PAYMENTS' section also lists 'High-Risk Card Processing' as 'Our pick'.

CONSOLE
AI at work
Every AI step in your store console, in one place: what it does, where it runs, and whether AI is actually used there.

ROSTER SUMMARY

ALL (11) LIVE AI (11)

LIVE AI (11)

A real AI call happens on this step. A person always reviews the draft.

AI support triage
Support tickets
Drafts an urgency read and a suggested reply for each open support ticket, for a person to review before anything is sent.

AI briefing
Operations dashboard
Drafts a daily headline and suggested next steps from the store's own ticket, cart and order counts. It never adds a number that is not in the data.

AI follow-up drafts
Follow-ups
Drafts messages for abandoned carts, held orders and back-in-stock requests, for a person to approve, edit or discard.

AtlasTx AI COO
Top bar button
Rules collect today's open items, urgent ones first, and rank them on this device. An optional AI pass can suggest a different order.

SAMPLE DATA

PREVIEW BUILD · SAMPLE DATA

✦ Roster read from the code

- The roster: the Atlas_{Tx} queue, a daily briefing, support triage, follow-up drafts, four outreach bots (cart recovery, back-in-stock, win-back, new leads), an operator assistant, provenance and replay, and brand-voice customer messaging.
- The briefing never adds a number that isn't in the data.
- Provenance and replay records which AI step ran, the wording it was given and what it read, and can re-run it to compare.
- The list is generated from the code, not written by hand.

**Eleven AI steps, listed from the code.
None sends anything on its own.**

Integrations
Platform partner support and availability

1 Payment Types
Available (adapter built) | Planned

2 Shipping & Fulfillment
Planned

2 Email/SMS & Analytics
Reference

Integration Status

Available (adapter built)	Planned	Reference
The connector is built in our engine. No contract or credentials yet.	On the roadmap. Not built yet.	Included for market comparison. No planned integration.

RECOMMENDED INTEGRATIONS

- High-Risk Card Processing** (Our pick)
Card processing for regulated retail categories such as research peptides. Adapter interface defined; processor not yet contracted.
Planned
- ShipStation** (Our pick)
Order fulfillment and shipping labels across carriers. Not yet connected in this deployment.
Planned
- Email & SMS** (Our pick)
Order updates, restock alerts and support notifications. Not yet connected in this deployment.
Planned

PAYMENTS

- High-Risk Card Processing** (Our pick)

Integrations for a store

→ WooCommerce / Shopify: planned

⚙ Processor: not contracted

⚙ Nothing connected yet

PLANNED

- On the page, all planned: card processing (processor not yet contracted), ShipStation labels and tracking, 3PL fulfilment, email and SMS, and analytics.
- The store connector itself is in the build plan.
- Each card says what is built, planned or waiting on an agreement. None is shown as live.
- Ad-account hand-off is in the build plan: an export pack first, a direct push later.

Store, payments, shipping and messaging, each with an honest status.

On a phone

→ 390-pixel phone width

🔗 SAMPLE label stays visible

🔗 Approve taps still required

SAMPLE DATA

LIVE IN DEMO · SAMPLE DATA

Atlas_{Tx}

- The dashboard, Atlas_{Tx}, the Ad Studio, follow-ups and support fit a 390-pixel phone screen.
- SAMPLE DATA stays visible on the phone.
- Anything that sends or changes a record still needs an approve tap.
- Perfectly wrapped to fit your phone. iOS and Android apps are planned, for you and your patients.

The whole console fits a phone.

SAMPLE data: every screen runs on labelled sample records and made-up sample ads.

Research use only: products in this business are sold for research use, not for human consumption. Nothing here is a health, benefit or dosing claim, and no purity figures are shown.

The store connector is in the build plan. No orders, customers, revenue or certifications are claimed.

FTE figures are estimates at BLS May 2025 median wages.

Norvane is a fictional brand made for this deck: invented name, logo and vial labels. It is not any real company.
